

# Matrix3™

Our Matrix3™ open-cavity wall allows builders to exceed the increasingly high standards of local building and energy codes. The open cavity is a familiar assembly to the building trades carrying the project forward after wall installation and is a natural fit for builders transitioning from conventional, site-built enclosures to prefab construction.

- 1 FRAMING
- 2 STRUCTURAL SHEATHING
- 3 RIGID WOOD FIBER INSULATION
- 4 WEATHER RESISTIVE BARRIER (WRB) / AIR BARRIER
- 5 RAINSCREEN BATTEN
- 6 HEMP OR CELLULOSE CAVITY INSULATION
- 7 INTERIOR VAPOR RETARDER / AIR BARRIER
- 8 INTERIOR SERVICE CAVITY

# Matrix3s™

The Matrix3s™ closed-cavity wall further simplifies on-site build sequencing with a shop-installed interior vapor retarder and air barrier, preparing walls for pre-insulation in our shop or insulation on-site. The interior service cavity is designed for ease of mechanical rough-in and installation of interior finishes while protecting the control layers from penetrations.
